GIF222M GEO-INFORMATICS (FUNDAMENTALS OF REMOTE SENSING)

<div align="right">
(CREDIT HOURS: 4+2)
</div>

Course goals:
- *Developing a basic understanding of science and applications of Remote Sensing.*
- *Interpretation of satellite images, and how to extract desirable information from images.*
- *Demonstrate the usefulness of remote sensing for earth and environmental science applications.*

THEORY (04 CREDITS)

UNIT I: OVERVIEW OF REMOTE SENSING

Remote sensing: Definition, history and scope. Types of remote sensing: Active and passive, Geostationary and Sun-synchronous. Types of platforms: air-borne, space borne and ground based.
Tutorial: Electromagnetic radiation (EMR) and Electromagnetic Spectrum (EMS); Interaction of EMR with atmosphere.
Assignment: Overview of remote sensing system and its components.

UNIT II: SENSORS AND SATELLITE SYSTEMS

Sensor resolution (spatial, spectral, radiometric and temporal) and its importance. Sensors: Multispectral and Hyperspectral.
Tutorial: Elements of visual image interpretation.
Assignment: Characteristics of important satellite systems: LANDSAT and IRS series of satellites.

UNIT III: DIGITAL IMAGE PROCESSING

Digital Image processing (DIP): Introduction to DIP. Digital data and data storage formats (BSQ, BIL, BIP), Data formats: IMAGE, SHP, TIFF, GEOTIFF, JPEG, TIGER.
Tutorial: Color composites: band combination, false color composite (FCC) and true color composites (TCC).
Assignment: Use of ancillary information for satellite data interpretation.

UNIT IV: APPLICATIONS OF REMOTE SENSING

Land use land cover mapping and monitoring.
Tutorial: Vegetation assessment (forest cover assessment and deforestation).
Assignment: Water resources assessment (water bodies, snow and glaciers).

PRACTICALS (02 CREDITS)

- Capabilities of open-source software (QGIS) in image processing.
- Hands-on exercises using satellite data.
- Basic image operations: Image stacking, rotate, subset and mosaic. Image visualization using False color composite (FCC) and True color composite (TCC).
- Satellite image interpretation for land cover mapping.

BOOKS RECOMMENDED:

- Lillesand, T., Kiefer, R.W., & Chipman, J. 2014. Remote sensing and image interpretation. John Wiley & Sons.
- Jensen, J.R. 1996. Introductory digital image processing: a remote sensing perspective (Ed. 2). Prentice-Hall Inc.
- Reddy, A. 2012. Text Book of Remote Sensing and Geographical Information Systems. BS Publications.
